While initially the standard will be voluntary, for the first time, second and third tier suppliers may be faced with pressure to undergo third party registration. After the year 2000, the next version of the standard has actually replaced the four existing standards, (AVSQ, EAQF, QS-9000 and VDA 6 1) and the price of entry to the global automotive market is conformance to this new standard. This handbook is an essential and comprehensive guide to enable organizations to interpret and implement the ISO/TS 16949.

Unlike other books on the subject, each element, clause and requirement is analyzed in detail with guidance provided for its implementation. The handbook is written primarily for implementers and discerning managers, for instructors and auditors and contains a range of solutions that would be acceptable in the automobile industry. It includes details of the certification scheme, the differences with existing standards, check lists, questionnaires, tips for implementers, flow charts and a glossary of terms. This book gives more than an overview, it tells how you to do it! Contains detailed instructions and check-lists for implementation Addresses all ISO requirements
