[Under the Glacier](#) - Halldor Laxness 2007-12-18

Nobel laureate Halldór Laxness's *Under the Glacier* is a one-of-a-kind masterpiece, a wryly provocative novel at once earthy and otherworldly. At its outset, the Bishop of Iceland dispatches a young emissary to investigate certain charges against the pastor at Snæfells Glacier, who, among other things, appears to have given up burying the dead. But once he arrives, the emissary finds that this dereliction counts only as a mild eccentricity in a community that regards itself as the center of the world and where Creation itself is a work in progress. What is the emissary to make, for example, of the boarded-up church? What about the mysterious building that has sprung up alongside it? Or the fact that Pastor Primus spends most of his time shoeing horses? Or that his wife, Ua (pronounced "ooh-a," which is what men invariably sputter upon seeing her), is rumored never to have bathed, eaten, or slept? Piling improbability on top of improbability, *Under the Glacier* overflows with comedy both wild and deadpan as it conjures a phantasmagoria as beguiling as it is profound.

**Marketing Aesthetics** - Alex Simonson 1997-08-30

There is no way to mistake the ubiquitous trademarked Coca-Cola bottle, or the stylish ads for Absolut Vodka with any of their competitors. How have these companies created this irresistible appeal for their brands? How have they sustained a competitive edge through aesthetics? Bernd Schmitt and Alex Simonson, two leading experts in the emerging field of identity management, offer clear guidelines for harnessing a company's total aesthetic output -- its "look and feel" -- to provide a vital competitive advantage. Going beyond standard traditional approaches on branding, this fascinating book is the first to combine branding, identity, and image and to show how aesthetics can be managed through logos, brochures, packages, and advertisements, as well as sounds, scents, and lighting, to sell "the memorable experience." The authors explore what makes a corporate or brand identity irresistible, what styles and themes are crucial for different contexts, and what meanings certain visual symbols convey. Any person in any organization in any industry can benefit from employing the tools of "marketing aesthetics." Schmitt and Simonson describe how a firm can use these tools strategically to create a variety of sensory experiences that will (1) ensure customer satisfaction and loyalty; (2) sustain lasting customer impressions about a brand's or organization's special personality; (3) permit premium pricing; (4) provide legal "trade dress" protection from competitive attacks; (5) lower costs and raise productivity; and (6) most importantly, create irresistible appeal. The authors show how to manage identity globally and how to develop aesthetically pleasing retail spaces and environments. They also address the newly emergent topic of how to manage corporate and brand identity on the Internet. Supporting their thesis with numerous real-world success stories such as Absolut Vodka, Nike, the Gap, Cathay Pacific Airlines, Starbucks, the New Beetle Website, and Lego, the authors explain how actual companies have developed, refined, and maintained distinct corporate identities that set them apart from competitors.

**Cost, Effectiveness, and Deployment of Fuel Economy**

**Technologies for Light-Duty Vehicles** - National Research Council 2015-09-28

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and

aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

**Assetization** - Kean Birch 2020-07-14

How the asset—anything that can be controlled, traded, and capitalized as a revenue stream—has become the primary basis of technoscientific capitalism. In this book, scholars from a range of disciplines argue that the asset—meaning anything that can be controlled, traded, and capitalized as a revenue stream—has become the primary basis of technoscientific capitalism. An asset can be an object or an experience, a sum of money or a life form, a patent or a bodily function. A process of assetization prevails, imposing investment and return as the key rationale, and overtaking commodification and its speculative logic. Although assets can be bought and sold, the point is to get a durable economic rent from them rather than make a killing on the market. Assetization examines how assets are constructed and how a variety of things can be turned into assets, analyzing the interests, activities, skills, organizations, and relations entangled in this process. The contributors consider the assetization of knowledge, including patents, personal data, and biomedical innovation; of infrastructure, including railways and energy; of nature, including mineral deposits, agricultural seeds, and “natural capital”; and of publics, including such public goods as higher education and “monetizable social ills.” Taken together, the chapters show the usefulness of assetization as an analytical tool and as an element in the critique of capitalism. Contributors Thomas Beauvisage, Kean Birch, Veit Braun, Natalia Buier, Béatrice Cointe, Paul Robert Gilbert, Hyo Yoon Kang, Les Levidow, Kevin Mellet, Sveta Milyaeva, Fabian Muniesa, Alain Nadaï, Daniel Neyland, Victor Roy, James W.
