**Team-Based Learning for Health Professions**

**Education** - Larry K.

Michaelsen 2020-08-29

Education in the health professions is placing greater emphasis on “active” learning—learning that requires applying knowledge to authentic problems; and that teaches students to engage in

the kind of collaboration that is expected in today's clinical practice. Team-Based Learning (TBL) is a strategy that accomplishes these goals. It transforms passive, lecture-based coursework into an environment that promotes more self-directed learning and teamwork, and makes the classroom come "alive." This book is an introduction to TBL for health profession educators. It outlines the theory, structure, and process of TBL, explains how TBL promotes problem solving and critical thinking skills, aligns with the goals of science and health courses, improves knowledge retention and application, and develops students as professional practitioners. The book provides readers with models and guidance on everything they need to know about team formation and maintenance; peer feedback and evaluation processes, and facilitation; and includes a directory of tools and resources. The book includes chapters in which instructors describe how they

apply TBL in their courses. The examples range across undergraduate science courses, basic and clinical sciences courses in medical, sports medicine and nursing education, residencies, and graduate nursing programs. The book concludes with a review and critique of the current scholarship on TBL in the health professions, and charts the needs for future research.

*Neurology Oral Boards Review* - Erobohene E. Ubogu 2005-08-15

It was 6 AM and the New Orleans Hilton lobby was dotted with young neurologists in suits wandering aimlessly, many mumbling to themselves, all with the eyes of a rough night on call. This was the morning of my Oral Board examination. Despite three years as a neurology resident, additional time as a fellow, and the experience of having performed probably more than 1000 neurological examinations by this time, I was deathly afraid of what this day would bring. The exam organizers had met with us the day before and given the overwhelming message to "RELAX. " Certainly, this is sound advice prior to any examination, but the requisite for passing is knowing the material. This requires preparation, as well as

practice. An excellent first step is to use Eroboghene Ubogu's Neurology Oral Boards Review in the months before you begin studying for the Boards in earnest. A quick read will provide an internal assessment of your strengths and weaknesses, which should guide the study plan. The major neurology textbooks, which anyone sitting for the Boards should already have in their possession, should be studied. Finding a senior faculty member to quiz you is very helpful. There is no substitute for finding one of your former re- dency supervisors or a senior colleague in your group practice to perform a simulated Oral Board session.

"The cerebrospinal vasculature originates at the aortic arch. The right brachiocephalic artery divides into the right common carotid artery and the right subclavian artery. The left common carotid and left subclavian arteries arise directly from the aortic arch. The 2 common carotid arteries bifurcate into the internal and external carotid arteries. *Epilepsy Across the Spectrum* - Institute of Medicine  
2012-07-29

Although epilepsy is one of the nation's most common neurological disorders, public understanding of it is limited. Many people do not know the causes of epilepsy or what they should do if they see someone having a seizure. Epilepsy is a complex spectrum of disorders that affects an estimated 2.2 million Americans in a variety of ways, and is characterized by unpredictable seizures that differ in type, cause, and severity. Yet living with epilepsy is about much more than just seizures; the disorder is often defined in practical terms, such as challenges in

school, uncertainties about social situations and employment, limitations on driving, and questions about independent living. The Institute of Medicine was asked to examine the public health dimensions of the epilepsies, focusing on public health surveillance and data collection; population and public health research; health policy, health care, and human services; and education for people with the disorder and their families, health care providers, and the public. In *Epilepsy Across the Spectrum*, the IOM makes recommendations ranging from the expansion of collaborative epilepsy surveillance efforts, to the coordination of public awareness efforts, to the engagement of people with epilepsy and their families in education, dissemination, and advocacy for improved care and services. Taking action across multiple dimensions will improve the lives of people with epilepsy and their families. The realistic, feasible, and action-oriented

recommendations in this report can help enable short- and long-term improvements for people with epilepsy. For all epilepsy organizations and advocates, local, state, and federal agencies, researchers, health care professionals, people with epilepsy, as well as the public, *Epilepsy Across the Spectrum* is an essential resource.
