Pilgrim at Tinker Creek - Annie Dillard 2009-10-13

Winner of the Pulitzer Prize "The book is a form of meditation, written

with headlong urgency, about seeing. . . . There is an ambition about her book that I like. . . . It is the ambition to feel." — Eudora Welty, *New York Times Book Review* *Pilgrim at Tinker Creek* is the story of a dramatic year in Virginia's Roanoke Valley, where Annie Dillard set out to chronicle incidents of "beauty tangled in a rapture with violence." Dillard's personal narrative highlights one year's exploration on foot in the Virginia region through which Tinker Creek runs. In the summer, she stalks muskrats in the creek and contemplates wave mechanics; in the fall, she watches a monarch butterfly migration and dreams of Arctic caribou. She tries to con a coot; she collects pond water and examines it under a microscope. She unties a snake skin, witnesses a flood, and plays King of the Meadow with a field of grasshoppers. The result is an exhilarating tale of nature and its seasons.

Merchant of Venice - William Shakespeare 1843

The Whole Child - Joanne Hendrick 1986

Tlön, Uqbar, Orbis Tertius - Jorge Luis Borges 1983

Here is a handsome edition of one of Borges' fictions, in a translation first published in Labyrinths in 1962. It's an important story in the Borges' canon, incorporating most of the author's philosophical and esthetic preoccupations in a typically brief compass. With great solemnity and a convincing array of scholarly detail (including annotated references to imaginary books and articles), Borges concocts a fable of an alternate world and its infiltration of our own. The reality of Tlon is idealist: material objects have no existence; language has no nouns; its

principal discipline is psychology, since its inhabitants see the universe as nothing but a series of mental processes. A series of 24 illustrations accompanies the text. Their disturbing resemblances to our reality make them appropriate reflections of Borges's imaginative constructs.' -- The Kingston Whig-Standard

Demographics and the Demand for Higher Education - Nathan D. Grawe 2018

"The economics of American higher education are driven by one key factor--the availability of students willing to pay tuition--and many related factors that determine what schools they attend. By digging into the data, economist Nathan Grawe has created probability models for predicting college attendance. What he sees are alarming events on the horizon that every college and university needs to understand. Overall, he spots demographic patterns that are tilting the US population toward the Hispanic southwest. Moreover, since 2007, fertility rates have fallen by 12 percent. Higher education analysts recognize the destabilizing potential of these trends. However, existing work fails to adjust headcounts for college attendance probabilities and makes no systematic attempt to distinguish demand by institution type. This book analyzes demand forecasts by institution type and rank, disaggregating by demographic groups. Its findings often contradict the dominant

narrative: while many schools face painful contractions, demand for elite schools is expected to grow by 15+ percent. Geographic and racial profiles will shift only slightly--and attendance by Asians, not Hispanics, will grow most. Grawe also use the model to consider possible changes in institutional recruitment strategies and government policies. These "what if" analyses show that even aggressive innovation is unlikely to overcome trends toward larger gaps across racial, family income, and parent education groups. Aimed at administrators and trustees with responsibility for decisions ranging from admissions to student support to tenure practices to facilities construction, this book offers data to inform decision-making--decisions that will determine institutional success in meeting demographic challenges"--
