when students become active doers of mathematics the greatest gains of their mathematical thinking can be realized both members and non members can engage with resources to support the implementation of the notice and wonder strategy on this webpage

unit circle math is fun

pythagoras pythagoras theorem says that for a right angled triangle the square of the long side equals the sum of the squares of the other two sides $x^2 + y^2 = z^2$ but $1^2 + 1^2 = 2$ is just 1^2 so $x^2 + y^2 = 1$ equation of the unit circle also since $x = \cos \theta$ and $y = \sin \theta$ we get $\cos^2 \theta + \sin^2 \theta = 1$ a useful identity important angles 30 45 and 60 you should try to remember \sin

classifying triangles video khan academy
and this right over here would be a 90 degree
angle you could have an equilateral acute
triangle in fact all equilateral triangles because
all of the angles are exactly 60 degrees all
equilateral triangles are actually acute so there s
multiple combinations that you could have
between these situations and these situations
right over here
