Care of the Obese in Advanced Practice Nursing - Lisa L.M. Maher, DNP, ARNP, FNP-BC 2015-12-02

The first book to provide APNs with the tools to effectively treat obese patients This book is the first resource to give the APN the practical tools with which to communicate, assess, and treat obese patients. Designed to help APNs to easily broach an uncomfortable topic, the book walks practitioners through the exam, providing tips on effective communication, understanding lifestyle constraints, and working with the patient to improve their condition without shame. Emphasizing multidisciplinary approaches and evidence-based treatment, the book addresses prevention, provider recognition, and treatment of adult and pediatric obesity with the goal of improving overall quality of life. The resource offers practical information on diet and exercise that foster healthy weight loss along with psychological, pharmacological, and surgical recommendations. Effective tips on all facets of working with obese patients, bolstered with real-life examples that provide the patient's perspective, help APNs understand and provide a better quality of care to these vulnerable patients. Additionally, the book includes substantial information on comorbidities, which add to the complexity of obesity treatment. Chapters address current trends and causes of obesity; communication "dos" and "don'ts;" the technical aspects of obesity including genetics and pathophysiology, obesity as an addiction; eating disorders; assessment from the APN point of view; disease management; pharmacological, surgical, and medical management; and costs and insurance coverage. Several tools that can be used to enhance clinical practice are featured in the Appendix. Key Features: Written specifically for the Advanced Practice Nurse Covers all facets of communication with, assessment of, and treatment of obese patients Includes case studies and treatment plans from a nursing perspective Highlights a multidisciplinary approach Includes effective tips, photographs, and real-life examples that illustrate the patient's perspective

Registries for Evaluating Patient Outcomes - Agency for Healthcare Research and Quality/AHRQ 2014-04-01

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

International Classification of Diseases for Oncology - Andrew Jack 2000

This edition of ICD-O, the standard tool for coding diagnoses of neoplasms in tumour and cancer registrars and in pathology laboratories, has been developed by a working party convened by the International Agency for Research on Cancer / WHO. ICD-O is a dual classification with coding systems for both topography and morphology. The book has five main sections. The first provides general instructions for

using the coding systems and gives rules for their implementation in tumour registries and pathology laboratories. Section two includes the numerical list of topography codes, which remain unchanged from the previous edition. The numerical list of morphology codes is presented in the next section, which introduces several new terms and includes considerable revisions of the non-Hodgkin lymphoma and leukaemia sections, based on the WHO Classification of Hematopoietic and Lymphoid Diseases. The five-digit morphology codes allow identification of a tumour or cell type by histology, behaviour, and grade. Revisions in the morphology section were made in consultation with a large number of experts and were finalised after field-testing in cancer registries around the world. The alphabetical index gives codes for both topography and morphology and includes selected tumour-like lesions and conditions. A guide to differences in morphology codes between the second and third editions is provided in the final section, which includes lists of all new code numbers, new terms and synonyms added to existing code definitions, terms that changed morphology code, terms for conditions now considered malignant, deleted terms, and terms that changed behaviour code.

Diagnostic and Statistical Manual of Mental Disorders - 2022

"DSM-5-TR includes fully revised text and references, updated diagnostic criteria and ICD-10-CM codes since DSM-5 was published in 2013. It features a new disorder, prolonged grief disorder, as well as codes for suicidal behavior available to all clinicians of any discipline without the requirement of any other diagnosis. With contributions from over 200 subject matter experts, this updated volume boasts the most current text updates based on the scientific literature. Now in four-color and with the ability to authenticate each printed copy, DSM-5-TR provides a cohesive, updated presentation of criteria, diagnostic codes, and text. This latest volume offers a common language for clinicians involved in the diagnosis and study of mental disorders and facilitates an objective assessment of symptom presentations across a variety of clinical settings-inpatient, outpatient, partial hospital, consultation-liaison, clinical, private practice, and primary care. Important updates in DSM-5-TR include 1) fully revised text for each disorder with updated sections on associated features, prevalence, development and course, risk and prognostic factors, culture, diagnostic markers, suicide, differential diagnosis, and more; 2) addition of prolonged grief disorder (PGD) to Section II; 3) over 70 modified criteria sets with helpful clarifications since publication of DSM-5; 4) fully updated Introduction and Use of the Manual to guide usage and provide context for important terminology; 5) considerations of the impact of racism and discrimination on mental disorders integrated into the text; 6) new codes to flag and monitor suicidal behavior, available to all clinicians of any discipline and without the requirement of any other diagnosis; 7) fully updated ICD-10-CM codes implemented since 2013, including over 50 coding updates new to DSM-5-TR for substance intoxication and withdrawal and other disorders"--
